

LOWE ENVIRONMENTAL IMPACT Agricultural Environmental Services

Working with Farmers

Lowe Environmental Impact (LEI) works with farmers who strive for excellence. We help to turn challenging waste and land management issues into sustainable long-term solutions that are right for your farm.

How can Lowe Environmental Impact (LEI) help you?

Managing land in an efficient and sustainable way requires strategic planning. We can work with you to provide support for:

- **Consent and Farm Planning**

We help you navigate resource consent requirements and implement sustainable land use practices. This ensures compliance, protects the environment, and supports long-term farm productivity.

- **Irrigation and Water Resource Management**

We deliver complete irrigation and land development solutions, helping farmers optimise water use, manage nutrients, meet regulations, and build sustainable systems.

- **Groundwater**

We provide groundwater assessment and consenting services to support reliable irrigation and development. Our expertise ensures environmental compliance and efficient water use.

- **Mapping**

We use GIS mapping to turn complex farm data into clear, actionable insights. This supports compliance, environmental planning, and better decision-making.

- **Monitoring and Compliance**

We help you stay compliant with your resource consent through expert monitoring, reporting, and support. This reduces risk and ensures smooth, environmentally responsible operations.

- **Nutrient Modelling and Management**

Using tools like OverseerFM, we support smarter farm planning. We help manage nutrient losses, meet regulatory requirements, and guide sustainable land use decisions.

- **Wastewater Management**

We design sustainable land-based wastewater solutions that meet regulations, support environmental and cultural goals, and deliver practical, cost-effective outcomes for communities and industry.
